In DevOps, this course gives participants hands-on experience on the world's most popular RDBMS databases like MySQL, and NoSQL databases like MongoDB, Redis, more. In order to learn the end to end platform, this course seeks to equip its learners with cloud computing concepts and how it helps companies save time and money, and the suitability of transitioning offline / internal business processes onto the cloud.

In the smart contract with Blockchain, this course equips participants with the knowledge and skills to apply Blockchain and Smart Contracts principles for real estates, wallets and international payments.

In Algo-trading, participants will have an insight on how machine learning and RPA can be leveraged and how more robust algo-trading models can be developed to generate higher returns.

Courses completed:

- DevOps: Build, Deploy and Monitor
- Making Contracts Smart with Blockchain
- Algo-trading, Theory and Practice
