View All Credentials

Participants will deep dive into the technical programming and expose to various tools and techniques, exploration of projects and project management tools, explore the frontend and backend where they will learn in web development technologies such as HTML,CSS, JavaScript, Node JS, ReactJS and data structures that are used in various computational problems.

Participants will also learn the fundamentals frameworks of Robotic Process Automation (RPA) and how to create bots that perform various repetitive processes. Besides software based training for RPA, there will also be components on Application Programming Interface (API) connections to automate various database processes which involve data handling and process execution.

Courses completed:
- Developers Toolkit Part 1: Connecting the Frontend
- Developers Toolkit Part 2: Middleware to Backend
- APIs and RPA: Automation, Bots and Future

Skills / Knowledge

API　　RPA　　Web Development Technologies
